

## High-Resolution Pressure Imaging

### for Anorectal Manometry

*All relevant data without probe repositioning*  
*High-resolution images of anorectal physiology*  
*Interactive protocol box to step you through the procedure*  
*Insensitive to probe movement and sensor directionality artifact*

RAIR

Squeeze with movement artifact

ManoScan 360AR™ is the most advanced system available for anorectal manometry. The 5.6 cm length of continuous circumferential sensing allows for fast and simple data acquisition. Unlike conventional manometry systems, ManoScan 360AR™ is immune to movements of the pelvic floor and of the catheter, yielding reliable results with simple data collection technique. There is no need for repositioning of the probe thereby eliminating patient involuntary squeeze artifact and shortening procedure time.

The high-resolution pressure images reveal the anorectal physiology and pathophysiology with unprecedented clarity, allowing you to intuitively diagnose disorders. The diagnosis process using the ManoView AR™ automated analysis software is highly efficient, producing conventional and advanced diagnostic metrics and generating reports in five minutes or less.

# Advanced analysis software for a new level of diagnostic simplicity and accuracy

## Automatically:

*Identifies RAIR events*

*Corrects for inadvertent movement of the pelvic floor using the e-sleeve*

*Captures intra rectal and balloon inflation pressures*

## Provides:

*Post procedure video playback*

*Ability to switch between high-resolution & conventional wave-forms*

*Rapidly generated custom reports*

Sample Anorectal Report

## High-Resolution Anorectal Catheters & Supplies

*Circumferential Catheters enable simplified procedures and yield the highest possible accuracy*
